Project Charter

1. Project Title

Uniplug - Multi-Tenant eCampus Management Platform

2. Project Background and Rationale

Higher institutions increasingly require unified, digital platforms to manage academic, administrative, and financial activities. Existing systems are often siloed, institution-specific, and lack interoperability, scalability, and modern user experience.

The proposed Multi-Tenant eCampus Platform is designed as a centralized yet institutionally independent system where multiple universities operate under a single platform while maintaining full autonomy over their data, processes, and configurations. The platform also extends beyond internal campus operations to support admissions, scholarships, parent engagement, and external organizations offering academic programs.

3. Project Purpose

The purpose of this project is to design and implement a scalable, secure, and extensible eCampus platform that:

- Hosts multiple universities (tenants) on a single infrastructure
- Digitizes end-to-end academic and administrative workflows
- Improves accessibility for students, parents, institutions, and external organizations
- Enables transparent financial and academic operations

4. Project Objectives

Primary Objectives

- Build a multi-tenant architecture where each university operates independently
- Provide a centralized application and admission system for applicants
- Enable full academic lifecycle management (registration, grading, results, fees)
- Support parental access and financial participation

Secondary Objectives

- Enable scholarship discovery and applications
- Allow third-party organizations to publish academic programs
- Ensure secure, role-based access control
- Provide auditability and compliance-ready reporting

5. Project Scope

In-Scope

Platform-Level (Global)

- Multi-tenant onboarding and management of universities
- Central applicant portal (apply to multiple institutions)
- Scholarship and program feeds (public and private)
- Identity and access management (IAM)
- Notifications (email, in-app, SMS - optional)
- Payment gateway integration with tenant-level settlement
- Analytics and reporting dashboard

University-Level (Tenant)

- Admissions management (applications, screening, offers)
- Student enrollment and profile management
- Course registration and academic calendar
- Results posting, grading, and transcripts
- Fee configuration and collections
- Hostel and accommodation management (hostels, rooms, bed spaces, allocation, pricing)
- Department, faculty, and staff management
- Role-based permissions (admin, lecturer, finance, hostel manager, etc.)

Student

- Application to institutions
- Course registration
- Academic record viewing (results, GPA, transcripts)
- Fee payments
- Hostel booking, rent payment, and renewal
- Scholarship applications
- Notifications and announcements

Parent

- Parent/guardian account registration
- Unlimited dependent/student linkage (subject to student approval)
- Viewing academic progress and hostel status
- Making approved payments on behalf of students
- Notifications related to student performance, accommodation, and financial obligations

External Organizations

- Organization onboarding
- Uploading programs and opportunities
- Visibility controls (public vs institution-private)
- Application management for their programs

Out-of-Scope (Initial Phase)

- Physical access control (ID cards, biometrics)
- Learning Management System (LMS) content delivery (optional future phase)
- Alumni employment marketplace (future roadmap)

6. Key Stakeholders

Internal Stakeholders

- Product Owner
- Senior Project Manager
- Engineering Team
- UI/UX Designers
- QA/Test Engineers

External Stakeholders

- University Administrators
- Academic Staff
- Students
- Parents/Guardians
- Scholarship Bodies
- External Educational Organizations
- Payment Service Providers

7. Assumptions and Constraints

Assumptions

- Universities are willing to operate under a shared platform
- Internet access is available to end users
- Institutions maintain their own financial accounts

Constraints

- Data isolation and privacy between tenants is mandatory
- Regulatory compliance (education and financial regulations)
- Scalability to support thousands of concurrent users

8. High-Level Risks

- Data leakage across tenants
- Payment settlement failures
- User adoption resistance from institutions
- Regulatory changes affecting education or payments

9. Success Criteria

- Successful onboarding of multiple universities
- Secure isolation of tenant data
- End-to-end academic operations completed digitally
- High availability and performance
- Positive user adoption metrics (students, parents, institutions)

10. High-Level Timeline (Indicative)

- Discovery & Planning
- MVP Definition
- Design (UX & Architecture)
- MVP Development
- Pilot with Selected Institutions
- Iteration & Scale

11. Approval

This charter authorizes the initiation of the Multi-Tenant eCampus Platform project and provides high-level guidance for subsequent planning and execution documents.
